NEW BOOKS

Of the approximately 200 new books received by the Army Medical Library each month a few are being chosen, more or less at random, for brief mention here.

AMOR, ARTHUR J. An x-ray atlas of silicosis; with translation of the legends into French by Robert E. Horne. 2d. ed. London, Simpkin Marshall, ltd., 1943, 206p.

The loss by enemy action of a portion of the first edition of this work has made necessary the earlier issue of this second edition than would otherwise have been the case. The essential radiological features of silicosis are shown in 72 plates and organ photographs. These are preceded by brief chapters on the etiology, pathology, radiological examination of the lungs, clinical manifestation and prognosis of silicosis.

JORDAN, HELEN MOUGEY, ed. You and marriage. New York, John Wiley & sons, inc., 1942, 296p.

This collection of fifteen lectures in several branches of science and learning deals with various aspects of human and social experience and opportunities for personal development. It presents the essential facts for a wholesome, satisfying marriage and offers practical help in managing the home and in feeding and clothing the family.

MONSCH, HELEN & MARGUERITE K. HARPER. Feeding babies and their families. New York, John Wiley & sons, inc. 1943, 386p.

This book is intended not only as a text for college students of family nutrition but as a guide for intelligent mothers in bringing up their families. It is based on extended experience in feeding mother and child from before birth of the baby through his adulthood, and in aiding mothers with their family problems of nutrition.

RHODES, W.F., ET AL. Medical jurisprudence, a South African handbook. Cape Town, Stewart printing co., 1942, 218p.

This volume is based on a course in medical jurisprudence given at the University of Cape Town. A section on post-mortem technic as applied to medicolegal work is given. The consideration of toxicology is confined to the postmortem detection of poisons.

WOLFF, WERNER. The expression of personality, experimental depth psychology. New York, Harper & brothers[c1943] 334p.

Personality is experimentally explored by an analysis of expressive acts. The forms of expression, such as face, hands, gait, voice, etc., are recorded without and with the subject's knowledge, thus enabling the experimenter to study the subject's spontaneous attitudes toward himself. This makes possible the study of the dynamics of conscious and unconscious reactions, including emotional factors underlying judgement and memory in a wide variety of situations.

WRIGHT, SIR ALMROTH E. Researches in clinical physiology. London, William Heinemann, ltd., 1943, 163p.

The papers collected in this volume are from the Innoculation Department of St. Mary's Hospital, London, and originally appeared in the Lancet, British Medical Journal, and other periodicals. The larger number deal with the coagulability and other properties of the blood, but papers on such subjects as diabetes, infant feeding, scurvy, artificial respiration, urticaria, and chillblains are also included.

WRIGHT, SIR ALMROTH E. Studies on immunisation. First series. London, William Heinemann, ltd., 1943, 421p.

This volume is a reprint of a book originally published in 1909. It consists of a series of studies on the protective elements of the blood and on vaccine therapy. The index, which is made a special feature of the book, is designed as an orderly synopsis of the subject by which the reader is enabled to find the particular points in which he is interested. By selection of entries the author gives prominence to certain points which deserve special consideration and supplies impersonal replies to certain of his critics.

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is $5.00 per year in the United States and $5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at $1.00 per year.
